

ON THE RIGHT TRAX

AbiliTrax will be featuring our state-of-the-art mobility products through the narrative of actual users of our products, and we are very proud that our first "On The Right Trax" newsletter introduces you to Don Szudarek, the Director of Transportation for over twenty years at Our Lady of the Wayside located in Avon, Ohio (greater Cleveland/Akron area).

Don Szudarek, Director of Transportation for Our Lady of the Wayside, Avon, Ohio

- Over 70 homes operated by Our Lady of the Wayside supporting over 600 children and adults with developmental disabilities....with over 100 wheelchair accessible vehicles in the fleet.

“Here at Our Lady of the Wayside we manage over 70 homes in the greater Akron/Cleveland region that provide support to over 600 children and adults with developmental disabilities. We are dedicated to making sure our clients experience a dignified and more traditional home/living environment. Almost 50% of our clients use a mobility device of some type and to properly facilitate our clients' special

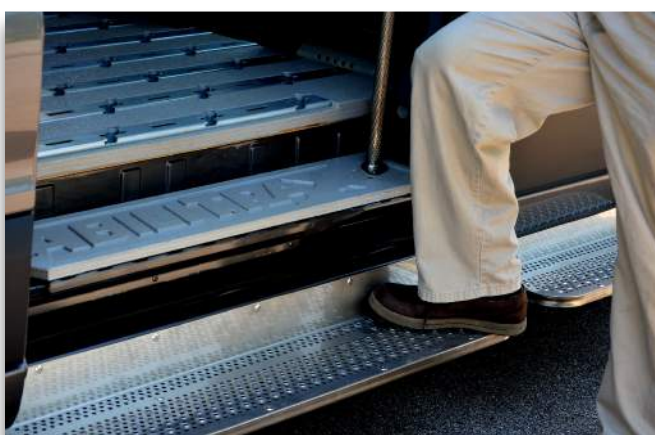

mobility transportation needs we operate over 100 vehicles in our fleet. With the AbiliTrax system, I know that we have virtually unlimited flexibility in meeting all of our clients' special transportation needs. The AbiliTrax system is by far the most flexible and the most durable flooring and seating system available. The slip resistant AbiliTrax flooring is ideal for the severe weather conditions we face here in the Great Lakes Region. Another important factor is that it's totally designed and manufactured right here in the United States.”

"Absolutely...AbiliTrax..." -Don Szudarek, Director of Transportation

Don also shares, "My drivers love the fact that they can adjust all the seating and wheelchair positions forwards and rearwards as well as side to side. By simply using your foot you can easily engage and disengage the AbiliTrax Step-N-Lock seat bases; and the fact that the AbiliTrax floor rails can accommodate either "A" fittings or "L" fittings is also very important to my overall transportation fleet program. I also know with certainty that within my entire AbiliTrax fleet that all my AbiliTrax Step-N-Lock seats and AbiliTrax Cam-Lock seats are totally interchangeable. As a transportation professional, having complete flexibility within your fleet, and flexibility that's totally FMVSS compliant; well that's huge!"

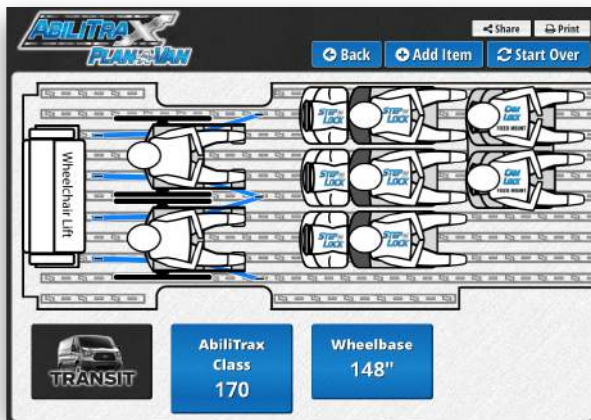

AbiliTrax manufactures stainless steel steps and stanchions and just like the AbiliTrax floor, it's made in America!

Patents Pending
